

IBIC Fuels Business Development in Europe

New Projects in Power Plant Construction and Chemical Industry

Neu-Isenburg, Germany. 22.03.2011 - IBIC GmbH, an international provider of engineering services for plant construction, today announced that it has won new customers and started several large projects in the first quarter of 2011. IBIC provides comprehensive consulting and engineering services targeted to the manufacturers and operators of power plants, refineries and chemical/pharmaceutical plants.

Project Profiles

IBIC has deployed seven staff members to support a data conversion project for a customer in the chemical industry. This project includes the migration of 650 Piping and Instrumentation Diagrams to SmartPlant P&ID from its existing PDS and AutoCAD systems.

For a power plant manufacturer, IBIC will use the PDS software to create 3D piping models and isometric drawings. This will help the customer reduce the environmental impact of existing, conventional power plants. Four IBIC engineers will work on site with the client for over a year to complete this project.

In another detailed engineering project, IBIC will create the necessary documentation in the areas of instrumentation and electrical engineering for a new chemicals production plant. Six employees will work on this project from IBIC's own offices over a period of 15 months. The SmartPlant Instrumentation and SmartPlant Electrical applications will directly access the customer's server via a CITRIX data connection.

Satisfied Customers

A project manager of an IBIC client is satisfied with his choice: "In various engineering projects, IBIC has impressed us with its professionalism, technical competence, project management skills and international teamwork at a fair price."

"We know how important it is to listen closely to our customers and document their exact needs," adds Hans-Peter Beier, founder and managing director at IBIC. "Based on that, we build a specialized project team which then delivers the desired service in a precise, timely manner. Our clients know that they can rely on us – and they value our dependability."
